Live Proctoring

For high-stakes licensure exams, critical certifications, and pre-employment screenings, Examity's Live Online Proctoring solution is the most secure choice for advanced online assessments.

When it comes to test integrity, we understand that every assessment comes with a unique set of considerations. For this reason, we offer two approaches to live online proctoring: live premium and live standard.

Premium

- ✓ Live authentication
- ➕ **Live, low-ratio proctoring**
- ➕ **Real-time, on-screen support**
- ➕ **Immediate exam intervention**
- ➕ **Pause/resume exam function**
- ✓ Flagged violations with video
- ✓ Human audit
- ✓ Reporting and analytics

Live Proctoring - Premium

Examity's Live Premium proctoring is recognised throughout the industry as the best choice for high-stakes certification and licensure exams, presenting the highest possible level of security.

All live proctoring sessions begin with live authentication. During this stage, a proctor will validate the test-taker's identity through three distinct steps. First, the proctor will verify that the ID on file matches with the ID brought to the test, and then compare the two with a real-time webcam feed of the test-taker. Next, the test-taker will answer a series of challenge questions. And finally, the test-taker will submit a digital signature.

The test environment then becomes the main focus as the proctor conducts a 360° sweep of the room and workstation, ensuring any unauthorized materials are removed before testing can proceed.

With authentication complete, the Examity proctor will have the test-taker review and acknowledge the exam rules. Once rules are confirmed, the proctor will open the exam and monitor the environment and test-taker. And as an added advantage, Examity proctors are able to provide interactive technical support in real-time if necessary. Upon exam completion, the proctoring session will be audited before exam session video and reporting is released to the administrator dashboard.

Standard

- ✓ Live authentication
- ✓ Live review of exam recording
- ✓ Flagged violations with video
- ✓ Human audit
- ✓ Reporting and analytics

Live Proctoring - Standard

Examity's Standard Live Proctoring provides the same capabilities of Premium's pre-test authentication and post-test audit. However, once live authentication is complete, the exam session activity will be monitored by our AI-technology, rather than a live proctor.

Upon exam completion, an Examity proctor and auditor will review authentication process and proctoring session. The recorded session, along with the corresponding reporting data, will then be released to the administrator's dashboard.

Which live online proctoring solution is right for your organization?
