Supplier Details

Owner: Isle of Man Government, Department of Infrastructure.

Product Description

Isle of Man Digital Map Data and the Isle of Man Spatial Data in DXF or Esri compatible Geodatabase formats, and other derived datasets.

The scales adopted are 1:1250 for major urban areas and 1:2500 for the remainder of the Island, including the upland areas. The sea boundary up to a 12 mile limit has been surveyed at a scale of 1:50000. There is also a 1:10000 scale coverage of the entire island derived from the larger scale mapping with the addition of contour information.

The data is contained in a total of 800 map tiles.

Core data have been created for use in Isle of Man applications. The basemap tiles are available in DXF or Esri compatible

Geodatabase formats. A Street Gazetteer, based on specification contained in BS7666, is available. This has been developed in ArcInfo but can be readily output in a format for incorporation in non-Esri applications.

An Address Gazetteer has been created containing geo-referenced property information for the entire Island.
